                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  sample that has been exposed to a compound or agent. Hepatotoxicity is characterised by centrilibular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1196 BP; 295 A; 279 C; 326 G; 296 T; 0 other;

                                                                 The present invention relates to a method of identifying a candidate insulin receptor (INR) signaling modulating agent, involving contacting an assay system comprising an insulin receptor signaling modifier (ISM) polypeptide or nucleic acid with a test agent, and detecting a test agent-biased activity of the assay system. The method is useful for identifying candidate INR signaling modulating agents. ISM genes may be used as drug targets for treatment of disorders related to INR signaling such as diabetes or metabolic syndrome. ISM nucleic acids and polypeptides are useful for identifying and testing agents that modulate ISM function and for other applications related to the involvement of ISM in INR signaling, and for identifying subjects having a predisposition to such diseases associated with INR signaling. The present sequence is an ISM coding sequence described in the exemplification of the invention.
                                                                                                                                                                                                                                                         Identifying an insulin receptor signaling modulator, useful as ditargets for treating diabetes or metabolic disorders, comprises contacting an assay system comprising insulin receptor signaling
                                                                                                                                                                                                                                                                                                                                      Seidel-Dugan

                                                                                     В
                                                                                                              ş
                                                                                                                                                                                                       The patent discloses a method to produce adenine nucleotide translocator (ANT) proteins or ANT fusion proteins using recombinant expression constructs. ANT is a nuclear encoded protein and a major component of inner mitochondrial membrane. It mediates transport of adenosine di/tri-phosphates across the mitochondrial inner membrane and also serves as an important molecular component of the mitochondrial permeability translation pore, a modulator of apoptosis. ANT is used to identify agents or ligands that bind to, or interact with it. The ANT ligands are used to detect or isolate ANT in a biological sample, and therapeutically for regulating mitochondrial pore activity, for treating diseases associated with altered mitochondrial function, including Alzheimer's, parkinson's and Huntington's diseases, cancer, psoriasis, diabetes, dystonia, cheber's hereditary optic neuropathy, schizophrenia, mitochondrial diabetes and deafness (MELAS), hyperproliferative disorders, mitochondrial diabetes and deafness (MIDD), and myoclonic epilepsy red ragged fibre syndrome. The present sequence is a cDNA cenceding adenine nucleotide translocator ANT2 from human brain.
                                                                                                                                                             Query Match

Human adenine nucleotide translocator-2 (ANT-2) cDNA sequence

Human; adenine nucleotide translocator-2; ANT-2; MTP; cyclophilin; mitochondrial permeability transition pore component; cell survival; mitochondrial core component; mitochondrial related disorder; cancer; Alzheimer's disease; diabetes mellitus; hyperproliferative disorder; ss. Homo sapiens.

                                                                                                                                      닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes for human adenine nucleotide translocator-2 (ANT-2) protein. ANT proteins are mitochondrial permeability transport of Angles across the mitochondrial inner membrane. ANT proteins interact with other mitochondrial core components e.g. cyclophilins to regulate MPT. The present invention relates to a novel nucleic acid expression construct comprising a promoter operably linked to a polynucleotide encoding a mitochondrial pore component polypeptide (e.g. ANT) fused to an energy transfer molecule (ETM) protein (e.g. ANT) fused to an energy transfer molecule (ETM) protein compression construct can alter mitochondrial membrane permeability expression construct can alter mitochondrial membrane permeability components. The methods are useful for screening for agents that alter components. The methods are useful for screening for agents that alter dysfunctional cell survival. Such as Alzheimer's disease, diabetes components acell survival such as Alzheimer's disease, diabetes components acell survival such as Alzheimer's disease, diabetes components. The methods are useful for screenia, mitochondrial encephalopathy, lactic acidosis, stroke,

                                                                                                                     Sequence 9, Application US/08961871 Patent No. 6013858 GENERAL INFORMATION:
APPLICANT: Wallace, Douglas C.
APPLICANT: Graham, Brett H.
APPLICANT: MacGregor, Grant R.
TITLE OF INVENTION: Mouse Lacking Heart-Muscle Adenine
TITLE OF INVENTION: Nucleotide Translocator Protein and Methods
NUMBER OF SEQUENCES: 11
                                                                                                                                                                                                                                                                                                                                                                                    781
                                                                                                                                                                                                                                                                                                                                                                                                                            910
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  721
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          850
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               661
